An e-shop for specialized measurement antennas

<http://antenna.satimo.fr>

- **MVG opens an ecommerce site to facilitate the purchase of measurement antennas online for its North American and Western European customers.**

A selection of four types of reference and measurement antennas: standard gain horns, open-ended waveguides, wideband horns, and electric sleeve dipoles are presented in this unique antenna e-shop initiated by MVG. Leader in the development of reference antennas for the characterization of RF devices, this step toward online availability adds a new dimension to the purchasing process for its customers. Customers can go online to not only consult specifications and make comparisons between

the various antennas they can also, just like any other online store, add to the cart, make payments, and expect delivery at their doorstep.

"We wanted to modernize and streamline the ordering process first for our loyal customers who know what they are looking for and want to save time, but we think the user-friendly features will also attract those who want to do comparison shopping for antennas in an efficient way as well", says Gianni Barone, International Sales Director of MVG.

To promote the launch, MVG is offering special sale prices on selected models until December 31, 2013.

About MICROWAVE VISION

MICROWAVE VISION Group – MVG – (NYSE-Euronext: ALMIC) is a leading global manufacturer of antenna test and measurement systems for the Telecommunications, Automotive, Defense and Aerospace industries, as well as for academic research. With the recent acquisition of REMC, specialists in shielded chambers for anechoic, EMC and screened room solutions, MVG offers the widest range and most innovative technology of its kind in the respective markets. The company brings together the high-precision electronic scanners developed by SATIMO using its "microwave vision" technology, ORBIT/FR products developed through a state-of-the-art technology of high-performance positioners and electromechanical scanners, AEMI high performing absorbing materials, and now REMC provider of specialized shielded chambers. MVG is located in 9 countries – France, Italy, Germany, UK, Sweden, USA, Israel, China, and Japan, and has more than 300 employees. The group boasts a wide client base including several large international companies. MVG achieved a turnover of € 46.2 million for the year end 31 December 2012. MVG has been awarded the OSEO certification "Innovative Company". Alternext, code ISIN FR 0004058949 | For more information, visit: <http://www.microwavevision.com>
