Sharvy, the Montpellier-based start-up, will be present at CES 2022

Eureka Park Exhibition Space, Business France - French Tech booth

▪ Sharvy will be present at the world's largest tech show, CES - Las Vegas - which will be held from January 5 to 8, 2022. Sharvy is an innovative web and mobile application for companies that allows them to optimize their resources while providing a better service to users.

Sharvy, representative of Montpellier's French tech, at CES

Sharvy, a start-up from Montpellier, is an application that allows employees to manage their work environment in a few clicks on their smartphone, by reserving parking, company cafeteria, and workstations.

Easy to install and use, it responds to increased staff mobility and new flex office habits, after two years of a global health crisis and a shift to **telecommuting**: whether or not to go to the office, whether or not to go to the cafeteria, whether or not to drive or bike. Mindsets have shifted, legislation has endorsed telecommuting in contracts, there are now multiple options, and Sharvy is taking them into account...

The application achieved instant success with public and private organizations, SMEs and large corporations, and their employees. Thanks to this strong take-off in France and Europe, especially with multinational companies (Nielsen, Subsea 7, Ralph Lauren, Total, Eugene Perma, Moët Hennessy, etc.), supported by initial fundraising and financing from the Occitanie Region, Sharvy wants to write **a new chapter in its history at CES 2022 in Las Vegas, by addressing decision-makers who will come from all over the world.**

A smart business concierge application at your fingertips

Sharvy is based on a self-learning, multi-criteria decision algorithm. It calculates and returns an immediate answer when asked to reserve a parking space, for example. Sharvy thus acts as an on-site **automated concierge** for daily services.

If you plan to come to the office, you can make a reservation in 3 clicks for your parking space, your company cafeteria, and your workstation in advance. If you choose not to come, you can let others know so that they can take advantage of the services you won't be using...

Optimization of general services

Companies that have had to reorganize their working methods and spaces with the **health crisis**, use Sharvy to easily improve the **on-site employee experience**.

In the front office, there is the personalized service provided to the employee which improves the quality of life at work and reinforces the feeling of belonging.

Because in the back office, quite simply, there is a very fine **optimization of general services**, a rationalization of the use of the company's shared resources.

With three concrete benefits noted on sites that use Sharvy:

1. The company cafeteria adapts its daily capacity by knowing in advance the number of reservations, which **avoids food waste**;
2. The parking lot virtually gains **25% of capacity** with the dynamic reallocation of vacant spaces for colleagues who do not come to work;
3. Office space is allocated (flex office), taking into account availability and constraints (social distancing) ...

About Sharvy

Allowing the intelligent management of shared spaces in companies - parking, workstations, cafeterias... -, Sharvy has already seduced major corporations such as Nielsen, Onet, Subsea 7, Ralph Lauren, Total, Moët Hennessy... It is already used daily by 30 000 people.

Launched under the name of MyCarSpot, the company has accelerated its growth recently thanks to the expansion of its value proposition.

It raised €1.2M in 2020 to finance its international development. It is targeting €2M in sales within three years.

Sharvy is located in Montpellier (Occitanie region), in the Hérault region of France, in the Business & Innovation Center (BIC), an incubator for innovative companies ranked among the top 5 in the world.

It is a member of the French Tech Méditerranée and of the Digital 113 cluster of digital companies.
